Experiment 7

1. **Execute the following index related queries:**

   1. Create an index of name employee_idx on EMPLOYEES with column Last_Name, Department_id

   2. Find the ROWID for the above table and create a unique index on employee_id column of the EMPLOYEES.

   3. Create a reverse index on employee_id column of the EMPLOYEES.

   4. Create a unique and composite index on employee_id and check whether there is duplicity of tuples or not.

   5. Create Function-based indexes defined on the SQL functions UPPER(column_name) or LOWER(column_name) to facilitate case-insensitive searches(on column Last_Name).

   6. Drop the function based index on column Last_Name.
